Today, our legal advocate, Scott Kurkoski hand delivered the following comments to the DEC on our behalf. The primary authors of the report, Dan Fitzsimmons, Bob Williams, Dale Roe and Scott Kurkoski spent many hours toiling over the regulations, reviewing the law, gathering input from many of you and evaluating industry standards and best practices. They synthesized their collection of information with what we know from our research and work over the years to be the best course to achieve smart natural gas development -- that's both good for the environment but also viable for the industry. Following delivery of our comments, Scott will testify at the New York State Assembly Hearings to represent our views on safe, responsible natural gas development.
